

and a facility to generate electricity. The equipment used to turn waste plastic into oil is developed and manufactured by RECYCLE ENERGY CO.,LTD. (Head Office · Fukuyama-city in Hiroshima pref.) , and can effectively convert polyethylene, polypropylene, and polystyrene into oil without separating them. The cracked oil has many potential uses, and the company has decided to use it as a fuel suitable for generating electricity.

Mr. Kian Hoe Seah, Managing Director has been chosen as one of the 10 Outstanding Young Persons of the World (Moral and/or environmental leadership category) by Junior Chamber International (JCI). He made the quick decision to take the initiative to turn waste plastic into oil, and was also proactive in a new industry.
